Education

University of Bucharest, Bachelor in Computer Science Expected Graduation - July 2027

- Relevant Coursework: Operating Systems, Data Structures and Algorithms, Formal Languages and Automata, Object-Oriented Programming, Graph Algorithms, Probabilities and Statistics

Experience & Volunteering

Nitro Association — Production Department Lead (Volunteer) November 2024 - present

- Nitro Association – AI competition platform organizing **ROAI**, selection program for Romania's team for the **International Olympiad in Artificial Intelligence (IOAI)**.
- Lead the production team for Nitro Association
- Coordinated cross-department collaboration, managing a small technical team, consisting of 4 people

Projects

Nitro Association Platform – Backend Contributor (Code) | Nest.js, TypeScript

- Developed scalable backend services using **Nest.js** and **TypeScript**, leveraging dependency injection and modular architecture.
- Implemented **caching strategies** (using in-memory **key-value stores**) to drastically reduce database query latency and server load for frequently accessed data.
- Contributed to an **asynchronous architecture** for processing AI model submissions

Nitro Association Platform – Frontend Contributor (Code) | React, TypeScript, Figma

- Developed the platform's landing page using **React**, ensuring a responsive layout and seamless user experience.
- Designed high-fidelity mockups and user interfaces using **Figma** to establish consistent visual branding.

HexBlade - Solo Developer | C++, SFML

- Implemented a core **turn-based game-loop** in order to manage complex states (e.g. player turn, player status).
- Employed **OOP principles** for modular entity design (characters, items), using 'std::vector' for dynamic entity management and 'std::map' for efficient, $O(\log n)$, lookups of game assets.
- Designed and implemented GUI elements using SFML, efficiently handling user input.

Hive - Social Media Platform | .NET, C#, SQL

- Developed a **scalable web application** for social networking using the **.NET ecosystem**, handling user authentication and content management.
- Integrated an **AI-powered moderation API** to automatically detect and filter harmful or unsafe speech, helping maintain a respectful and safe platform environment.

Technical Skills

Languages: C/C++, TypeScript, Python, SQL, C#, Java, HTML, CSS, JavaScript

Tools & Frameworks: Git, Linux, Docker, Nest.js, .NET, React, Bruno, Figma

Soft Skills

- Effective communicator, able to convey complex technical ideas clearly
- Experience in team leadership and cross-department coordination
- Adaptability and problem-solving in dynamic environments

Languages & Certificates

English: Cambridge C1 Advanced | **Romanian:** Native

Interests

Software Architecture, Web Development, Artificial Intelligence, Cyber Security, Game Development
