Education

University of Bucharest, Bachelor in Computer Science

- Relevant Coursework: Operating Systems, Formal Languages and Automata, Graph Algorithms, Probabilities and Statistics, Object-Oriented Programming, Data Structures and Algorithms

Projects

HexBlade - Solo Developer

April - May 2025

- Implemented a core turn-based game-loop in order to manage complex states (e.g. player turn, player status).
- Employed **OOP principles** for modular entity design (characters, items), using 'std::vector' for dynamic entity management and 'std::map' for efficient, $O(\log n)$, lookups of game assets.
- Designed and implemented GUI elements using SFML, efficiently handling user input.

Nitro NLP Platform – Backend Contributor

August 2025 - present

- Developed scalable backend services using **Nest.js** and **TypeScript**, leveraging dependency injection and modular architecture.
- Implemented **caching strategies** (using in-memory **key-value stores**) to drastically reduce database query latency and server load for frequently accessed data.
- Contributed to an **asynchronous architecture** for processing AI model submissions, utilizing TypeScript's strict typing to enhance system reliability.

Nitro NLP Platform – Frontend Contributor

November 2025 - present

- Designed high-fidelity mockups and user interfaces using **Figma** to establish consistent visual branding.
- Developed the platform's landing page using **React**, ensuring a responsive layout and seamless user experience across devices.
- Collaborated on component architecture to create reusable UI elements for the broader application.

Minimalist File Management System

January 2025

- Implemented a low-level file management system entirely in x86 assembly AT&T syntax
- Developed advanced operations including file **search** and a **defragmentation algorithm** to consolidate fragmented disk blocks, applying these to both linear (1D) and matrix-based (2D) partition models.
- Optimized I/O performance by implementing a **read/write buffer**, and efficient use of syscalls

Hive - Social Media Platform

September 2025 - January 2026

- Developed a scalable web application for social networking using the **.NET ecosystem**, handling user authentication and content management.
- Collaborated in a team setting using an **Agile workflow**, participating in sprint planning and iterative development cycles.
- Gained practical experience in modern web development architectures, API design, and database integration within a production-like environment.

Experience & Volunteering

Nitro NLP — Production Department Lead (Volunteer)

November 2024 - present

- Lead the production team for Nitro NLP, an AI competitions platform focused on NLP
- Coordinated cross-department collaboration, managing a small technical team

Technical Skills

Languages: C/C++, Python, SQL, TypeScript, C#

Tools & Frameworks: Git, Linux, Docker, Nest.js, .NET, Bruno, Figma

Web: HTML, CSS, JavaScript, React

Soft Skills

- Effective communicator, able to convey complex technical ideas clearly
- Experience in team leadership and cross-department coordination
- Time management and balancing multiple projects alongside academic workload
- Adaptability and problem-solving in dynamic environments

Languages & Certificates

English: Cambridge C1 Advanced | **Romanian:** Native

Interests

Software Architecture, Web Development, Game Development, Artificial Intelligence
